

Task 4: Dashboard Design | Sales & Financial Executive Dashboard

Data Analyst Internship (Elevate Labs)

Objective

Design an interactive dashboard in Power BI that gives business stakeholders a quick view of sales and profit performance.

Tools & Dataset

- **Tool:** Power BI
- **Dataset:** Sales & financial data (`financial_data.csv`), cleaned into `financial_data_cleaned.csv` before loading into Power BI

What I Did

1. Cleaned the raw dataset and saved it as `financial_data_cleaned.csv`.
2. Imported the cleaned file into Power BI.
3. Built the **Sales & Financial Executive Dashboard** with KPI cards, a slicer and a time-series chart.
4. Summarized the dashboard in a PPT.

Dashboard Features

Feature	Details
KPI cards	Total Sales, Total Profit, Profit Margin %, Total Orders
Slicer	Region (Central, East, South, West)
Time-series	Line chart: Sum of Sales by Order Date
Theme	Rounded cards on a grey canvas with a purple accent

Key Figures (Region = East)

Metric	Value
Total Sales	678.78K
Total Profit	91.52K
Profit Margin %	13.48% (Profit ÷ Sales)
Total Orders	1.401K (Count of Order ID)

Selecting another region in the slicer updates all cards and the chart.

Repository Contents

```
└─ financial_data.csv
# raw dataset
└─ financial_data_cleaned.csv
# cleaned dataset used in Power BI
└─ dashboard.pbix
# Power BI dashboard file
└─ dashboard_screenshot.png
# dashboard screenshot
└─ Task4_Dashboard_Summary.pptx
# PPT summary
└─ README.md
```

Possible Improvements

- Sort the trend chart by Order Date (Year → Month) to show the true sales trend.
- Add a Growth % (year over year) KPI.
- Add a navigation menu and more views (Category, Segment).
